

TradingView → Hummingbot Trading Flow

Setup Notes

- ✓ Use Tradingview DEX and CEX screener to find trading opportunities
- ✓ Apply strategy and iterate backtesting until satisfied with results
- ✓ In the properties section, ensure to add the relevant trading fees
- ✓ Update trading pair. Example: BTCUSDC, RAYUSDC
- ✓ Select dropdown network: Avalanche, Arbitrum, Base, mainnet-beta etc.
- ✓ Select dropdown exchange: Raydium, Coinbase, OKX etc.
- ✓ Select dropdown pool type: amm,clmm,n/a
- ✓ Select dropdown bot: custom, hummingbot, octobot, coinrule
- ✓ Enter the API key (this is a one time generated key using openssl rand -hex 32)
- ✓ Using Tradingview Alerts, Generate JSON file for TradingView Alert: {{strategy.order.alert_message}}
- ✓ Use NGROK for local webhook tunneling so the bridge can receive the JSON file
- ✓ Use mosquito for mqtt communication
